KINERJA PT BRI UNIT RANUYOSO – LUMAJANG 2012 - 2016

ABSTRAKSI

Penelitian ini dilakukan untuk menguji secara empiris pengaruh variabel *Non Performing Loan* (NPL), *Loan to Deposit Ratio* (LDR), dan Biaya Operasional / Pendapatan Operasional (BOPO) secara parsial terhadap Kinerja PT BRI Unit Ranuyoso. Selain itu, penelitian ini menguji secara empiris pengaruh NPL, LDR, dan BOPO secara simultan terhadap kinerja (ROA) pada PT BRI Unit Ranuyoso – Lumajang periode 2012 – 2016. Penelitian ini menggunakan data sekunder yang diperoleh dari tempat penelitian melalui perantara, data yang telah dicatat, ataupun data yang sudah dipublikasikan. Analisis data dilakukan dengan analisis kuantitatif berupa uji asumsi klasik yang terdiri dari uji normalitas, uji multikolinearitas, uji heterokedastisitas, dan uji autokorelasi. Selain itu penelitian ini juga menggunakan analisis regresi berganda serta uji hipotesis. Selama periode pengamatan menunjukkan bahwa data penelitian berdistribusi normal. Berdasarkan uji normalitas, uji multikolinearitas, uji heterokedastisitas, dan uji autokorelasi tidak ditemukan variabel yang menyimpang dari asumsi klasik. Hal ini menunjukkan bahwa data yang tersedia telah memenuhi syarat untuk menggunakan model persamaan regresi linier berganda. Dari hasil analisis menunjukkan bahwa data NPL, LDR, dan BOPO secara parsial dan simultan signifikan terhadap ROA PT BRI Unit Ranuyoso pada level signifikansi kurang dari 5%. Hasil uji *Adjust R²* menunjukkan bahwa kemampuan prediktif dari semua variabel adalah 98.4% dan sisanya 1.6% dipengaruhi variabel lain diluar model.

Kata Kunci: *Non Performing Loan* (NPL), *Loan to Deposit Ratio* (LDR),
Biaya Operasional / Pendapatan Operasional (BOPO) dan **Kinerja (ROA)**.

EFFECT OF NON PERFORMING LOAN (NPL), LOAN TO DEPOSIT RATIO (LDR), AND OPERATIONAL COSTS / OPERATING REVENUES (BOPO) TO PERFORMANCE OF PT BRI UNIT RANUYOSO - LUMAJANG 2012 – 2016

ABSTRACT

The purpose of this research is to find out the influence of Non Performing Loan (NPL), Loan to Deposit Ratio (LDR) and BOPO, on performance partially of PT BRI Unit Ranuyoso – Lumajang in 2012 – 2016 periods. This research is also testing empirically the influence of NPL, LDR, and BOPO simultaneously to performance (ROA) of PT BRI Unit Ranuyoso – Lumajang. This research utilized secondary data obtained from research place by intermediaries, data has been recorded, or data has been published. Data analysis was done quantitatively in terms of classical assumption test include normality test, multykolinearity test, heteroscedasticity test, and autocorrelation. This research also uses multiple regression and hypothesis test. During research show as data research was normally distributed. Based on normality test, multicollinearity test, heteroscedasticity test and autocorrelation test variable digressing of classic assumption has not founded. Its indicate that the available data has fulfill the condition to use multi linier regression model. From the result of analysis indicate that data NPL, LDR, and BOPO partial and simultaneously significant toward ROA of PT BRI Unit Ranuyoso at level of significant less than 5%. Adjust R^2 test result show predictive ability from all variable is 98.4% and the rest 1.6% affected by another variable outside the models.

Keywords: *Non Performing Loan (NPL), Loan to Deposit Ratio (LDR), Operational Costs / Operating Revenues and Performance (ROA).*
